Allowable Subject Matter

- 1. Claims 1-13 are allowed.
 - The following is an examiner's statement for reasons for allowance.
- 2. Claims 1-13 are allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose a method of transmitting, in the time-division multiplex frames, in accordance with a given allocation of the channels to groups each including a subset of the channels, the [time slots] of each of the groups in a time-interleaved manner such that between respective two of the data bits of one of the [time slots] of a given one of the groups there is a respective one of the data bits of each remaining one of the [time slots] of the given one of the groups and such that the groups are transmitted sequentially. It is noted that the closest prior art of record, Lee et al (US Patent 6426955) shows a method of using a smart bus arbiter to provide variable data rates. However, Lee et al fails to suggest the specific method of transmitting TDM frames in accordance with a given allocation of the channels in time slots as required by the claimed invention.
